

My Reflection

Being a member of physics society committee gives me a lot of insight and inspiration about how this committee works. However, there are still problems within the society that are required to solve.

1. Not enough supporters, sponsors

A lack of supporters and sponsors significantly limits a university society's ability to operate at its full potential. Without sufficient external backing, the society faces constraints in funding events, expanding outreach, and developing new initiatives that enrich the student experience. Financial limitations can also hinder long-term planning, making it difficult to sustain ambitious projects or respond effectively to the evolving needs of members. As a result, the society may struggle to maintain visibility, competitiveness, and overall impact within the wider university community.

2. Not popular enough compared to other societies

When a society is less popular than its counterparts, it encounters challenges in attracting new members, retaining engagement, and fostering a dynamic community. Lower participation reduces the diversity of ideas and contributions that are essential for a vibrant student organisation. It can also limit the society's ability to host large-scale events or collaborate with other groups, further diminishing its presence on campus. This lack of prominence may create a cycle in which reduced visibility leads to fewer opportunities for growth and development.

3. Need to communicate more in depth with the department

Insufficient communication with the academic department can hinder a society's ability to align its activities with institutional goals and access valuable support. Stronger dialogue enables better coordination of events, improved access to resources, and clearer understanding of departmental expectations. Without this connection, the society may miss opportunities for academic collaboration, guest lectures, or funding pathways. Enhanced communication is therefore essential for ensuring that the society operates effectively and remains integrated within the broader academic environment.
